

clever – creative – sustainable – smart

utz UIC

UIC® Utz Industrial Compound

What does UIC® mean?

UIC® is the protected umbrella brand for all specified, high-quality, secondary raw materials used at Utz for our products. UIC® is registered and protected in all Utz markets.

Why do we use UIC®?

By using UIC® for its projects, Utz signals to the market and its customers that we are committed to ensuring sustainability, quality, process stability and reliability in the supply chain. We do not use any kind of «low-cost recyclables» of unknown origin, but only tested, high-quality, secondary raw materials as specified. The technical properties of the material are documented in a Utz data sheet for this test.

Who is involved with UIC®?

The Utz raw materials team selects the appropriate secondary raw materials that are authorized to carry the UIC® brand. The production and quality assurance teams determine the use of different UIC® grades in certain products.

Where do we use UIC®?

UIC® can be used in all storage and transport logistics areas, as well as for technical parts. Where legal regulations prohibit the use of secondary raw materials, UIC® cannot be used nor offered. Utz maintains an honest relationship with its customers!
