Our commitment

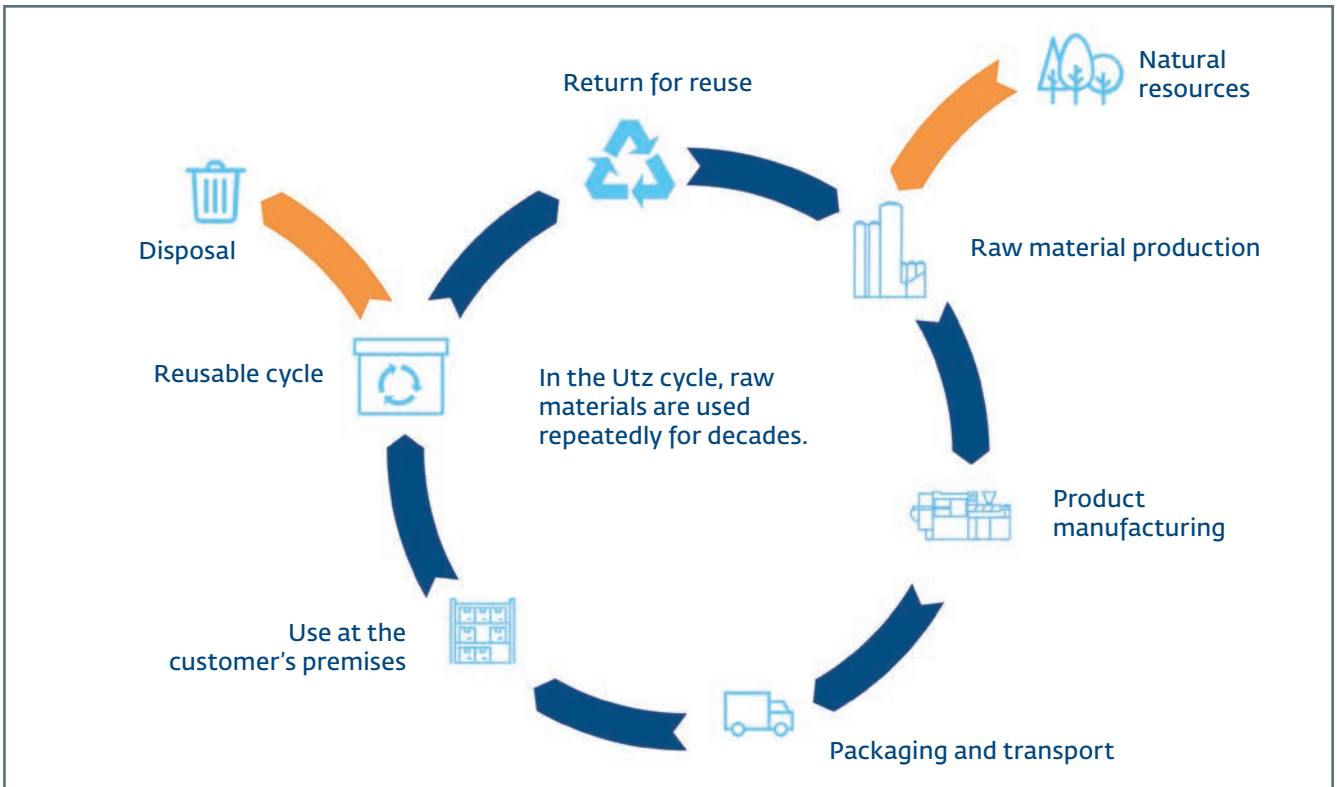

Our partnership

The Utz group has always been committed to environmental sustainability, recognising real ecological progress means carbon neutrality. To reach this goal, slowly but surely, we are utilising the support of the myclimate foundation. Thanks to the expertise of myclimate, and through climate protection projects, we are already able to offer certain carbon neutral Utz products. Our climate strategy is paving our way, as a company, to achieving net zero emissions and making our contribution to the 1.5-degree target. The Utz employees, the Board of Directors and shareholders are fully committed to these climate goals.

UIC® – The Utz Group's contribution to climate protection

UIC® are high-quality, certified and tested secondary raw materials. This Utz brand stands for quality, performance and sustainability around the globe.

- The carbon footprint of a UIC® container or pallet is up to 60 % lower than that made from virgin materials.
- In 2020, the Utz Group was already able to save 25,000 tons of CO₂ through the use of UIC®.
- The raw material is largely delivered as bulk in silo vehicles and without additional packaging.
- Where possible, we plan and promote the use of renewable energies at all our locations across the globe.
- We follow and support the ZeroWaste strategy in our daily activities.
- The Utz Group sites are always chosen with a focus on proximity to customers and optimum transport routes.
- All of our products are designed to be recycled and are mostly used in a reusable cycle.
- At the end of their service life, we take back our products, recycle and reuse in line with a circular economy.
- We can offer a closed material cycle, conserving natural resources and reduce our product carbon footprints.

Axel Ritzberger, CEO Georg Utz Holding AG

«The high quality and added value of our Utz products increase their duration of use and their economic efficiency. Utz has also been committed to the circular economy for over 50 years and guarantees the almost complete recyclability of all products.»

Calculate the carbon footprint of an Utz product

On request, we can calculate the carbon footprint of your Utz products, based on internationally recognised standards.

The values used include the systematic recording and analysis of greenhouse gas emissions over the entire life cycle of Utz containers. The analysis comprises all raw materials, their production, packaging, transport, as well as the distribution and disposal of the product. Please speak to our specialists, we will be happy to advise you on the introduction of carbon-neutral reusable packaging in your company.
